

## FUEL SIGHT GAUGE GRID

In the last issue of the newsletter, I introduced this fuel sight glass backing material to the membership after seeing an article about it in "Sport Aviation".

I passed out samples of this sight gauge backing device at our River Ranch gathering on a first come, first serve basis. I printed these gauge backs on HP Transparency material and backed it up with double sided, white tape with the ink jet printing turned toward the tape to seal it and protect the ink from moisture.

For those others not at River Ranch, who have requested one of these gauge backing devices, you may print this page out at high resolution on paper or mylar material and cut out the gauge backing to the size you desire. Then back it up with double sided tape and attach it behind your sight gauge. If you are printing on paper, I'd seal the paper with some adhesive mylar to protect the paper and ink.
